UCC 1.0 Release Notes

Version 1.0
Stand: 11. Februar 2013

Inhaltsverzeichnis

1 Release highlights

With Univention Corporate Client 1.0, the first release of the successor of Univention Corporate Desktop and UCS Thin Client Services is now available.

2 Upgrades from Univention Corporate Desktop and UCS Thin Client Services

Since the image-based installation approach used in UCC is technically totally different from the installation procedures used in UCD and TCS, no direct upgrade path exists.

UCC can be installed in parallel to TCS. Existing UCD managed/mobile and TCS thin clients need to be replaced with UCC clients.

On installations, where Univention Thin Client Services is installed on the Domänencontroller Master, the thin client server needs to be migrated to a Domänencontroller Backup, Domänencontroller Slave or Memberserver system before an upgrade to UCS 3.0 (and subsequently 3.1) is possible.
